Leading technology consulting firm delivering world-class business and technology solutions across Botswana.

Arranging racks into a hot aisle/cold aisle configuration (discussed at right) is a cooling best practice that has been implemented to improve the efficiency of raised floor data centers. However, the hot air can ...

A CAC system surrounds the cold aisle and it keeps cold supply air separate from hot server exhaust air. This setup reduces the chance of air mixing and bypass airflow.

Aisle containment in the data center requires that cabinets are aligned in a hot aisle/cold aisle layout. Containment panels or strips create a partition to isolate either the server supply air (cold aisle ...
