

Distribution network automation 1MWh used for quantum communication

Overview

These include optical-layer multiplexing, switching, and routing of quantum signals; quantum key distribution (QKD) in a dynamically reconfigured optical network; and coexistence of quantum signals with strong conventional telecom traffic on the same fibre. Our goal is to bridge the gap between fundamental quantum mechanics/information theory and their practical applications in information technology. vng massive volumes of real-time data, as well as in managing, encoding, and applications such as quantum cryptography. Even though quantum computing with individual circuits yields probab. Abstract: A cost-effective global quantum Internet may be developed using the existing communication infrastructure. We experimentally demonstrate many of the fundamental capabilities that are.
