Overview

A GPON network consists of several key components that work together to provide high-speed internet access. These include an Optical Line Terminal (OLT), Optical Network Unit (ONU), Optical Distribution Network (ODN), and Optical Fiber Cable. Cisco introduces GPON with the Catalyst GPON platform. 984 is the series of standards that define the architecture and operation of gigabit -per-second-capable passive optical network (GPON). It is commonly used to implement the link to the customer (the last kilometre, or last mile) of fibre-to-the-premises (FTTP) services, using a. GPON is a point-to-multipoint fibre network architecture that allows multiple users to share a single optical fibre, reducing infrastructure costs while delivering high-speed connectivity. This article explores the technical foundations, working. In simple terms, a GPON (Gigabit Passive Optical Network) network is a high-speed data transmission system that uses fiber optic cables to deliver internet services to our homes and businesses.
