

How to connect the optical splitter board

Overview

Connect the Optical Source: Using an optical (TOSLINK) cable, connect your source device's Optical Out to the splitter's SPDIF Input. When employing the first-level splitting method in a residential network, optical splitters offer flexibility for indoor or outdoor installation. Indoor options encompass locations like the community's central computer room, building's weak current well, or floor wiring box. more This video provides a step-by-step. However, connecting one splitter to another—also known as cascading splitters—can be tricky. Optical coupler and splitter guide: split or combine fiber signals, choose the right device, and optimize your fiber network for reliable performance.

In this guide, we'll explain how to safely connect a splitter to another splitter, covering both fiber optic and coaxial setups.

Network designers and ISPs aiming for efficiency must focus on effective passive optical network design, with careful consideration of PON architecture planning and splitter placement.

Learn about optical splitter split ratios (1:N, 2:N), centralized vs. cascaded architectures, and how to choose the right setup for FTTH PON networks.

Mate the splitter output fibre connector to the adapter in the distribution field (Figure 6). Route the splitter output fibre slack as shown on the fibre routing label on the inside of the cabinet door.
