

How to connect the positive and negative terminals of a laser diode illustrated

Overview

In this article, we will show how to connect and build a simple laser diode circuit to get light output from a laser diode. A laser diode makes a narrow beam of light. This is helpful for finding objects or lining things up in electronics projects. This means it must be directed at its source. The RY-LASER01 is a high-performance Laser Diode manufactured by Rytronics, designed to emit coherent light through the process of stimulated emission of photons. Select resistors with low tolerance values to set the correct operational current, as variations.

How to connect the positive and negative terminals of a laser diode

To turn it on, you just need to connect the correct voltage with plus to the red wire and minus to the black wire. The exact voltage you need depends on your module. The seller should be ...
