## Irish Relay Protection Tester

Protection relay tester can be used to verify various relays and microcomputer protections, and can simulate a variety of complex transient, permanent, and conversion faults for the entire set of tests.

With its six-phase output, this tester provides comprehensive testing capabilities, making it an essential instrument for ensuring the accuracy and reliability of protection relays in critical electrical networks.

It is a quick test tool to test automotive relays and know their status. If the relay test is abnormal, the light red LED is bright, if it is normal, the green LED is lit.

Use our precision relay test sets from leading HV equipment manufacturers Megger and T& R for testing a huge variety of different relays on both single and three phase equipment.
