

Kazakhstan Telecommunications and Fiber Optic Cables

Overview

Kazakhstan and Azerbaijan have officially launched the active phase of an ambitious project to lay the first-ever fibre-optic cable beneath the Caspian Sea—a major step toward transforming the region's digital infrastructure and strengthening connectivity between Asia and Europe. The cable will run along the seabed of the Caspian Sea, from the Kazakh city of Aktau to the Azerbaijani city of Sumgayit. The project, initiated by NEQSOL Holding and implemented through its subsidiary AzerTelecom, is part of the Digital Silk Way, a large-scale digital infrastructure project designed to build a high-capacity transit fiber-optic network linking Europe with Central and South Asian markets. Kazakhstan and Uzbekistan are striving to reduce their digital dependence on Russia and tilt their economic attention a bit more to the West. According to Bagdat Mussin, CEO of Kazakhtelecom JSC, the underwater cable system is scheduled for completion and launch by the end of the year. FTTH (Fiber To The Home - fiber optics to apartment) is a broadband high-speed Internet connection based on the use of fiber optic cable that can reach speeds of up to 500 Mbit/s. ADSL (Asymmetric Digital Subscriber Line) is a technology via conventional

telephone wire to access Internet.

Kazakhstan Telecommunications and Fiber Optic Cables

Kazakhstan, officially the Republic of Kazakhstan, is a country that is bigger than Western Europe, and stretches over a vast expanse of northern and central Eurasia to the west of the Ural River. ...
