

Optical module length in meters

Overview

SFP distance refers to the maximum effective range over which an SFP optical module can transmit data while maintaining signal integrity. An SFP (Small Form-factor Pluggable) module transmits data over fiber using specific wavelengths and power levels, which directly influence how far the signal can travel before degradation occurs. This is why two modules with the same form factor can have dramatically different ranges—some limited. The Cisco[®] 10GBASE SFP+ modules (Figure 1) give you a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise wiring closet, and service provider transport applications. Cisco 10GBASE SFP+ modules offer the following features and benefits. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. When comparing short-range and long-range options, the choice depends heavily on deployment environments.
