

What is the C port of the core switch

Overview

It can be connected to access switch with Gigabit fiber ports, and to core switches with 10 Gigabit fiber ports or Gigabit Ethernet ports. Located on the standard cabinet in machine room, the switch can be connected to fiber optical transceivers and access switches. As one of the industry's first purpose-built 25/50 Gigabit SFP and 100/400 Gigabit QSFP line of modular switches targeted for the enterprise campus, Catalyst 9600 Series switches deliver exceptional table scale (MAC, IP route, and Access Control List) and buffering for enterprise. The Cisco® Catalyst® 9500 Series switches are the next generation of enterprise-class core and aggregation layer switches, supporting full programmability and serviceability. If it is a small local area network with several computers, a small switch with 8 ports can be called a core switch. Located on the standard cabinet in.
