

Where to plug in the fiber optic cable if there s no router

Overview

The fiber optic cables will ultimately be connected to an optical network terminal (ONT) situated either on the side of your house, in the basement, or in the garage. These ONTs will act as the primary point of entry for fiber optic lines providing phone, internet, and television. If your ISP doesn't require a technician to set up your connection, these are the steps to self-install fiber internet: Locate your fiber network terminal. Connect the fiber terminal to the network box. Set up your home Wi-Fi. Running fiber internally involves extending this high-speed link from the service entry point to a centralized location, such as a dedicated media closet or network rack. It allows for upgrading to higher bandwidth by just replacing the SFP modules on each end. In general you should use riser rated cables indoors, there are very narrow use cases where you would need plenum rating (low smoke) in a normal house.

Where to plug in the fiber optic cable if there s no router
